CytoSorbents™

Safe Harbor Statement

Statements in this presentation include forward-looking statements intended to qualify for the safe harbor from liability established by the Private Securities Litigation Reform Act of 1995. These forward-looking statements include, but are not limited to, statements about our plans, objectives, future targets and outlooks for our business, representations and contentions, and the outcome of our regulatory submissions, and are not historical facts and typically are identified by use of terms such as "may," "should," "could," "expect," "plan," "anticipate," "believe," "estimate," "predict," "potential," "continue" and similar words, although some forward-looking statements are expressed differently. You should be aware that the forward-looking statements in this presentation represent management's current judgment and expectations, but our actual results, events and performance could differ materially from those in the forward-looking statements. Factors which could cause or contribute to such differences include, but are not limited to, our restructuring of our direct sales team and strategy in Germany, the impact of geopolitical events including the recent war in Iran, our ability to successfully obtain U.S. FDA and Health Canada regulatory approval and marketing authorization, our ability to complete our strategic workforce and cost reduction plan to reduce costs, optimize operations, and achieve operating cash-flow break-even in the second half of 2026, our ability to appropriately finance the Company, including our ability to meet our financial obligations and comply with the covenants under our existing debt agreement, our ability to fund and develop new and existing research and development programs, and the risks discussed in our Annual Report on Form 10-K, filed with the SEC on March 30, 2026, as updated by the risks reported in our Quarterly Reports on Form 10-Q, and in the press releases and other communications to shareholders issued by us from time to time which attempt to advise interested parties of the risks and factors which may affect our business. We caution you not to place undue reliance upon any such forward-looking statements. We undertake no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events, or otherwise, other than as required under the Federal securities laws.

About Non-GAAP Financial Measures

To supplement our condensed consolidated financial statements, we use the non-GAAP financial measures of EBITDA, which measures earnings before interest, income taxes, depreciation and amortization, and Adjusted EBITDA which further excludes non-cash stock compensation expense, the gain or loss of foreign exchange translation, and restructuring charges. We also use the non-GAAP financial measures of Adjusted Net Income or Loss and Adjusted Net Income or Loss Per Share which excludes non-cash stock compensation expense, the gain or loss of foreign exchange translation, and restructuring charges from Net Loss and Net Loss Per Share, respectively. Additionally, we use the non-GAAP financial measure of Negative Free Cash Flow which consists of net cash used in operating activities plus net cash used in investing activities. These non-GAAP measures are not based on any comprehensive set of accounting rules or principles and should not be considered a substitute for, or superior to, financial measures calculated in accordance with GAAP and may be different from non-GAAP measures used by other companies. In addition, these non-GAAP measures should be read in conjunction with our financial statements prepared in accordance with GAAP. The reconciliations of the non-GAAP measures to the most directly comparable financial measures calculated and presented in accordance with GAAP should be carefully evaluated. We use these non-GAAP financial measures for financial and operational decision-making and as a means to evaluate period-to-period comparisons. We believe that these non-GAAP financial measures provide meaningful supplemental information regarding our performance and that both management and investors benefit from referring to these non-GAAP financial measures in assessing our performance and when planning, forecasting, and analyzing future periods. We believe these non-GAAP financial measures are useful to investors because (1) they allow for greater transparency with respect to key metrics used by management in its financial and operational decision-making and (2) they are used by investors and the analyst community to help them analyze the performance of our business, the Company's cash available for operations, and the Company's ability to meet future capital expenditure and working capital requirements. For a reconciliation of non-GAAP financial measures to the most comparable GAAP measure, see the reconciliation included in the financial tables. All non-GAAP adjustments are presented pre-tax.

CytoSorbents Overview

- U.S.-based medical device company (Nasdaq: CTSO) specializing in blood purification to treat life-threatening conditions in the intensive care unit and cardiac surgery with its proprietary, biocompatible, porous polymer bead technology

- **CytoSorb** is the leading CE-mark approved extracorporeal cytokine adsorber in the European Union and is manufactured by CytoSorbents in the U.S.
  - Distributed in more than 70 countries worldwide, **with 300,000+ human treatments to date**
  - Approved for:
    - Cytokine Removal
    - Bilirubin and Myoglobin Removal
    - Ticagrelor and Rivaroxaban removal during cardiothoracic surgery
  - $37.3M in sales (ttm 6/30/26) with 72% gross margins – High margin razorblade
  - Strategic Partnerships with Fresenius Medical Care, B Braun, Aferetica, and Terumo Cardiovascular
  - U.S. government support for the technology with ~$50M in grants, contracts, and other non-dilutive funds from NIH, NHLBI, DARPA, DHA, US Army, US Air Force, JPEO-CBD, USSOCOM, etc.

- DrugSorb ATR Pursuing U.S. FDA and Health Canada approval of DrugSorb-ATR to reduce perioperative bleeding risk in patients on blood thinners during cardiac surgery as a 2-time FDA Breakthrough Device

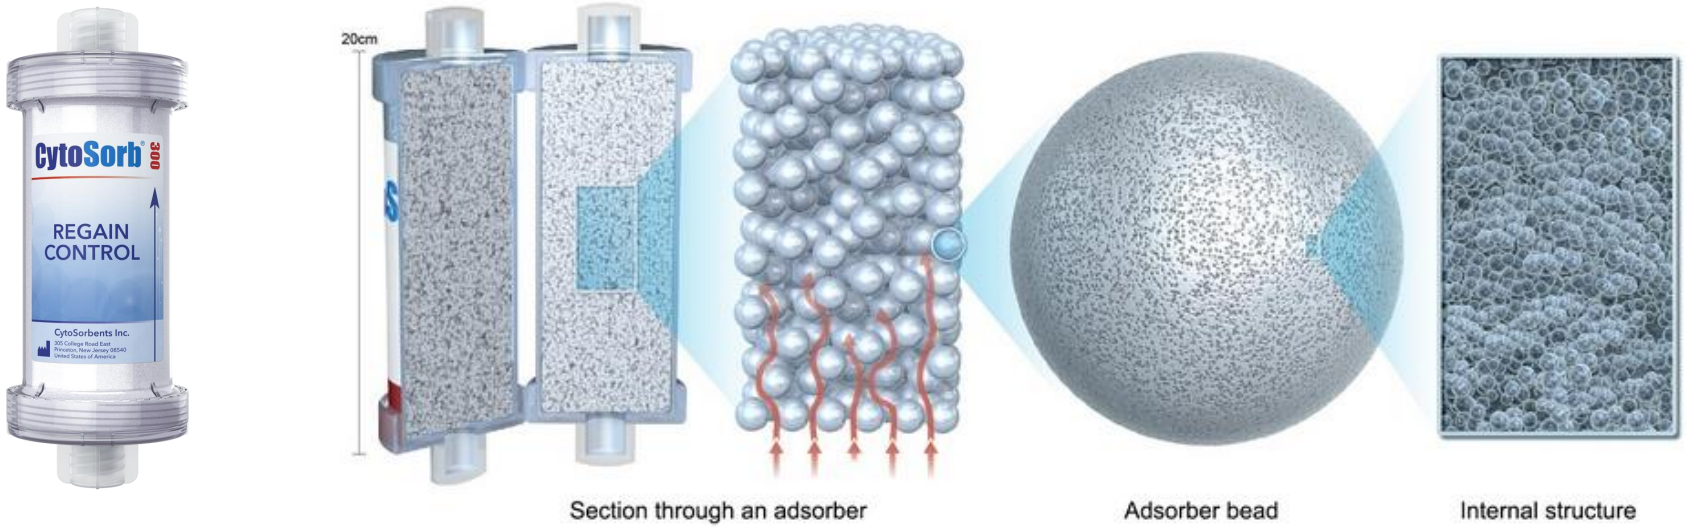

- **HEMODEFEND-BGA** Funded by $16M in DoD funding – targeting the holy grail of universal blood products

- Q2 2026 cash burn was $200K (less restructuring costs). Anticipating operating cash flow breakeven in 2H 2026 and future profitability in late 2027-2028.

CytoSorbents™

The Power of the Bead

Hemocompatible, highly porous polymer beads that act like tiny sponges to remove harmful substances from blood by pore capture, adsorption, and concentration

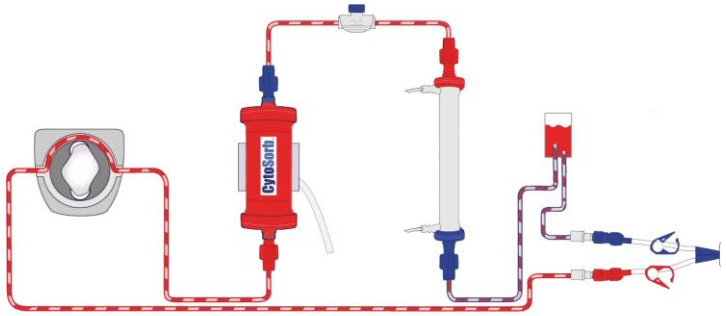

- Robust platform technology that rapidly removes a broad range of substances from whole blood and plasma
- Solid state porous polymer chemistry that does not use labile and expensive ligands, antibodies, cells, or biologics
- 20 issued U.S. patents and multiple patents issued and pending worldwide

CytoSorbents™

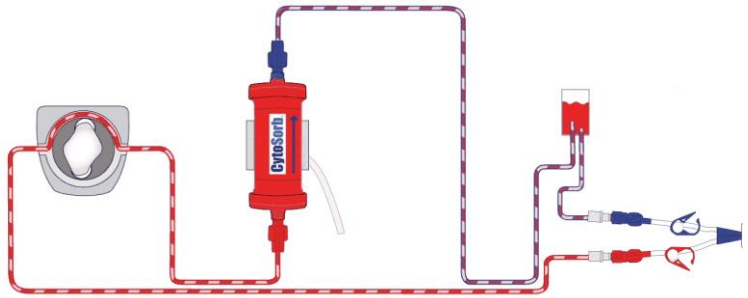

Products are “Plug and Play” Compatible

Compatible with Existing Blood Pump Infrastructure In Hospitals Today

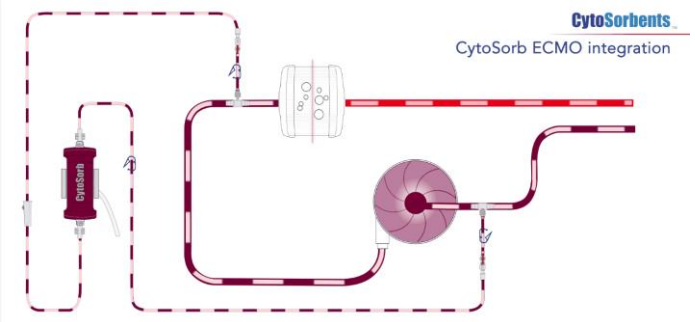

Dialysis or CRRT
(Continuous Renal Replacement Therapy)

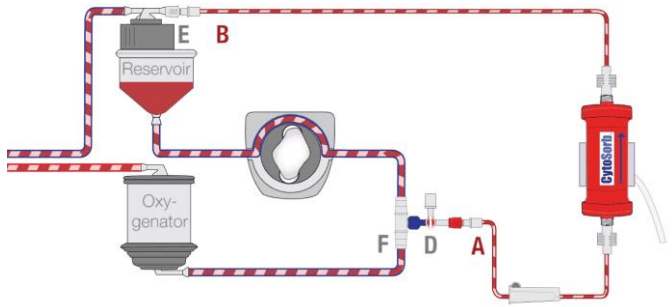

Hemoperfusion
(Standalone Treatment)

ECMO
(Extracorporeal Membrane Oxygenation)

CPB
(Cardiopulmonary Bypass)

CytoSorbents™

We are an Innovation Leader in Acute Care Blood Purification

Commercially Available Products		
CytoSorb®	Sepsis | Critical care | Cardiac surgery	E.U., FDA EUA
ECOS-300CY®	Ex-vivo organ perfusion for transplant	E.U.
VETRESQ®	Veterinarian critical care	U.S.

CytoSorbents™

Four Independent Key Drivers of Value Creation

CytoSorbents™

CytoSorb

Our Core Business

 CytoSorb is E.U. CE Mark approved but not yet cleared or approved in the U.S./Canada

CytoSorb is Expanding the Dimension of Blood Purification

CytoSorb is a powerful blood purification technology CE-mark approved in the E.U. to reduce cytokines, bilirubin, myoglobin, and blood thinners like ticagrelor & rivaroxaban. It removes many substances that dialysis cannot.

Dialysis is designed to work like the kidney

Small Molecules and
Water soluble substances

Urea, Ammonia
Electrolytes
Water
Water-soluble drugs

CytoSorb is designed to work like the liver

Large Molecules and
Fat soluble substances

Cytokines
Inflammatory mediators
Bacterial toxins
Liver toxins
Proteins and peptides
Fat-soluble drugs

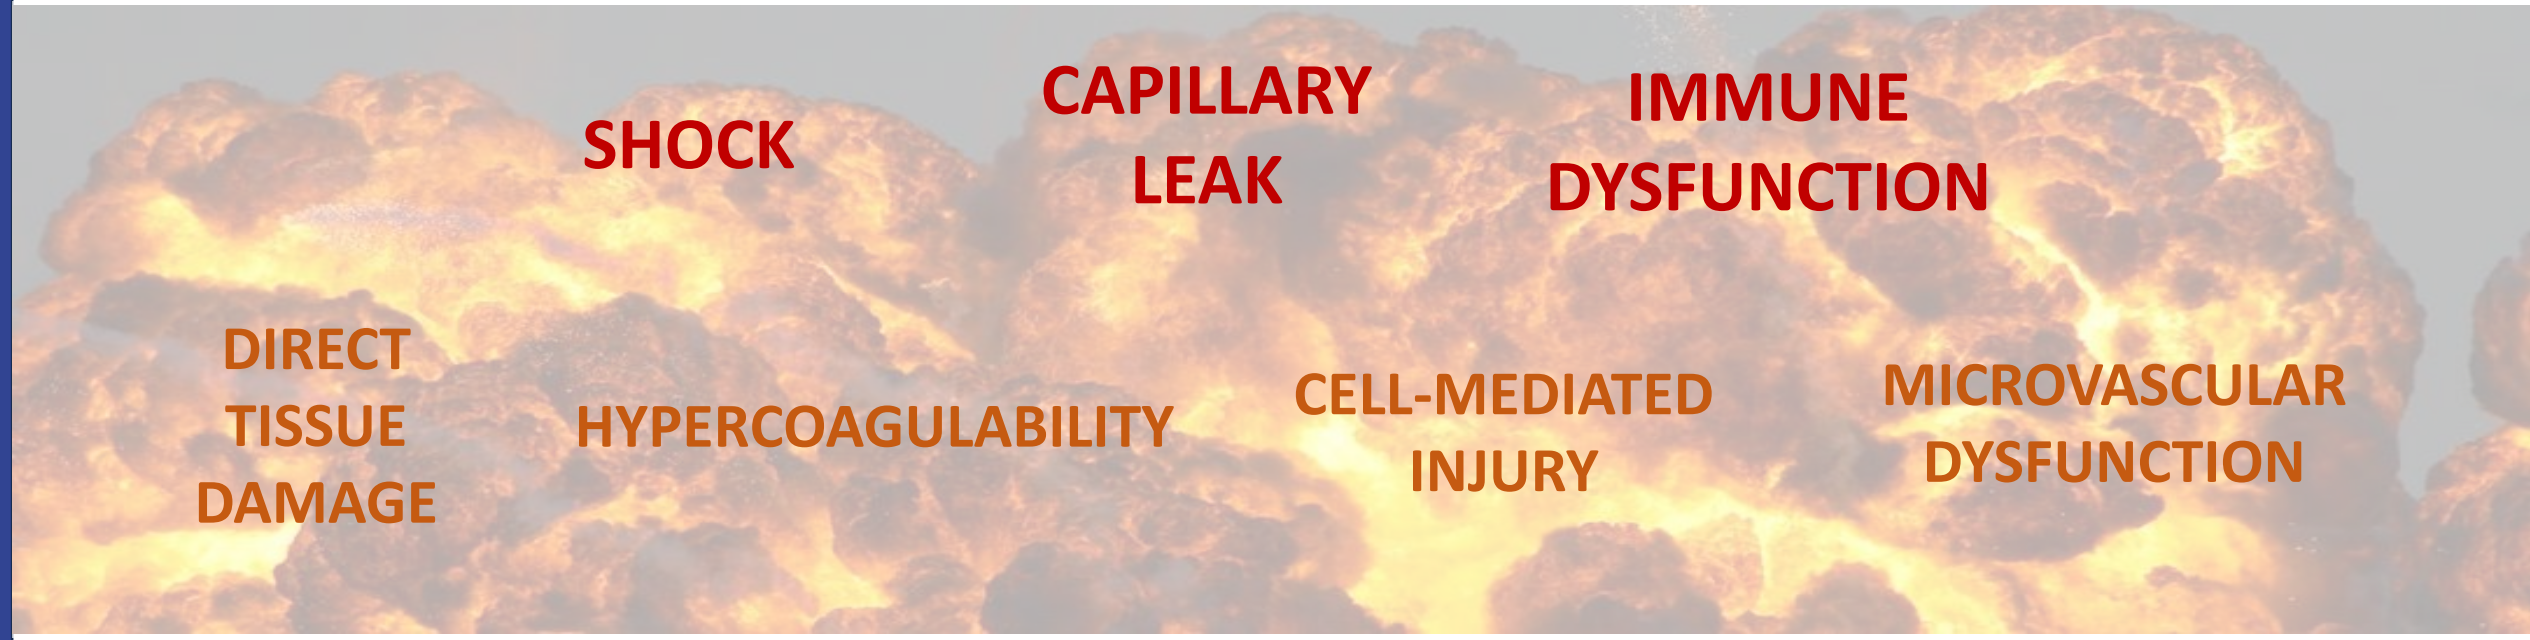

CytoSorb has 7 football fields of surface area to bind toxins versus
¾ of a ping pong table for a dialyzer

CytoSorbents™

CytoSorb is approved in the EU but is not yet cleared/approved in the US or Canada

Uncontrolled Massive Inflammation - the Heart of Critical Illness

- Acute inflammation is the body's mechanism to fight injury and infection
- However, severe inflammation, driven by cytokine storm, can cause a chain reaction of problems that can end in organ failure and death

- Severe inflammation is the common thread amongst most critical illnesses and impacts up to 60% of patients in the ICU. Is directly correlated to increased severity of illness, organ failure, and mortality

CytoSorb removes cytokines and other inflammatory toxins that fuel the fire of this deadly inflammation

CytoSorbents™

Targets Deadly Conditions That Afflict Millions of People

Critical Care

Removes the "fuel to the fire" of massive uncontrolled inflammation that is often associated with organ failure and death

Sepsis

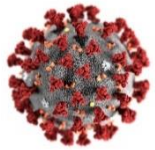

Surgical Complications

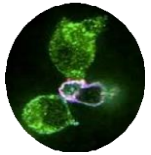

Influenza

Burn Injury

COVID-19

Cytokine Release Syndrome

Lung Injury

Liver Failure

Trauma

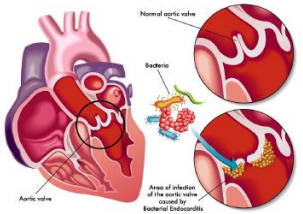

Pancreatitis

Cardiothoracic Surgery

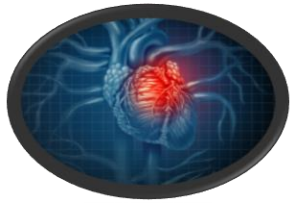

Reduces inflammation and blood thinners, targeting reduction in complications of cardiac surgery like sepsis, bleeding, shock, and others

Life-threatening bleeding due to anti-thrombotic "blood thinners"

Infective Endocarditis

High Risk Procedures

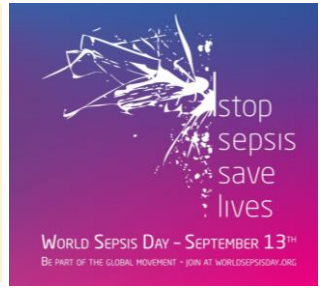

CytoSorbents™

CytoSorb is approved in the EU but is not yet cleared/approved in the US or Canada

CytoSorbents is Leading a New Era in Sepsis Treatment

For more than a decade, CytoSorbents has collaborated with clinicians and scientists around the world to advance the treatment of sepsis and septic shock – the cause of nearly 1 in 5 deaths worldwide - by complementing traditional antibiotics with CytoSorb blood purification

Antibiotics treat the infection

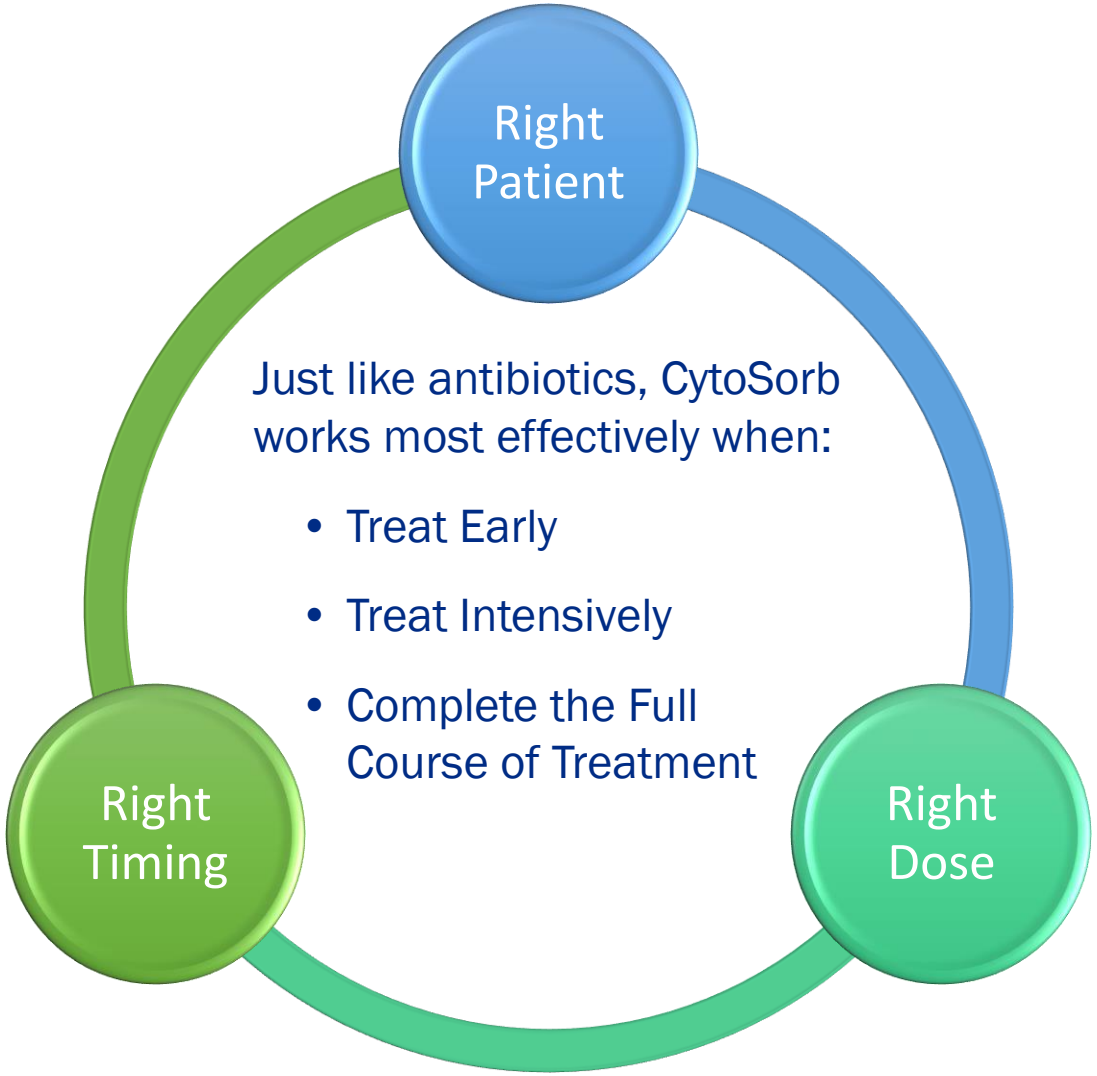

CytoSorb treats the deadly inflammatory response by removing the “fuel to the fire” that causes a system crash

CytoSorbents™

The Key to Success: Right Patient, Right Timing, Right Dosing

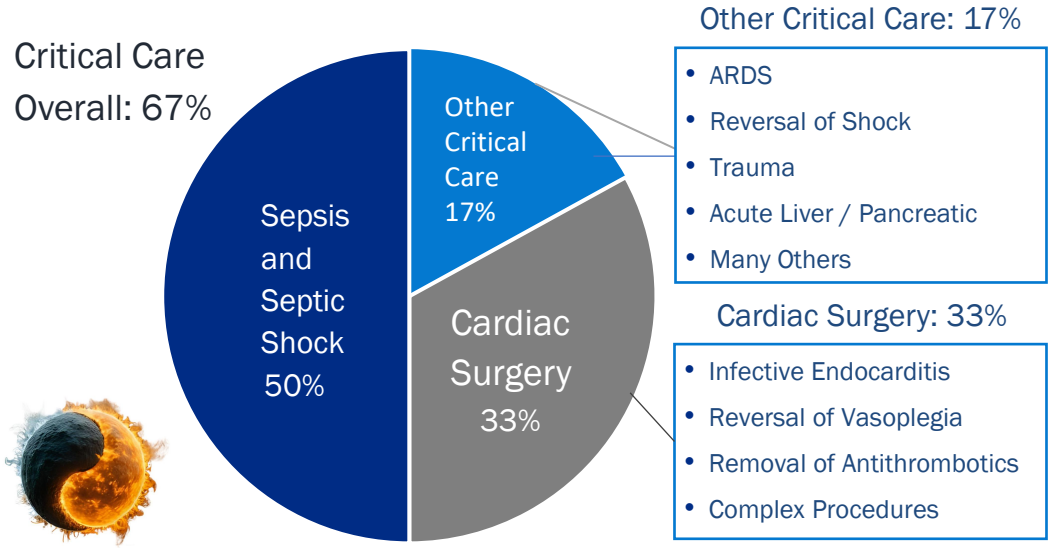

Before and after treatment of a patient with liver disease

CytoSorbents™

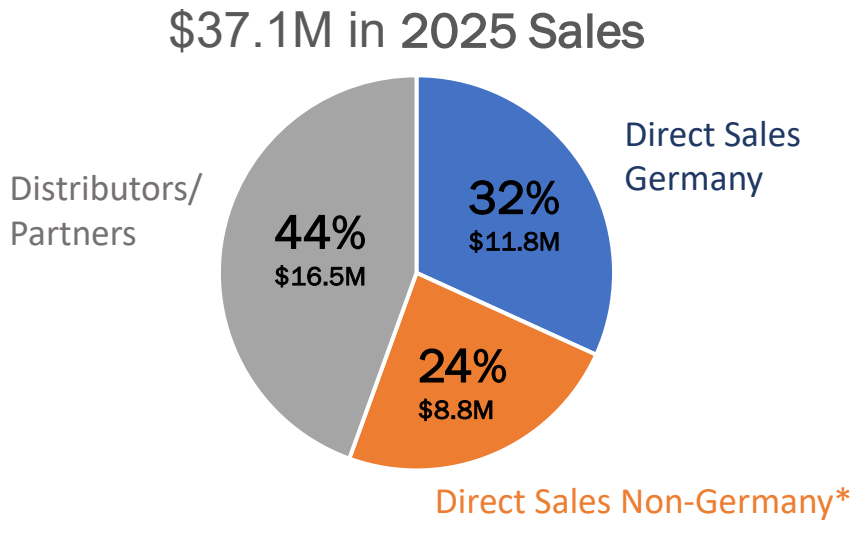

CytoSorb Commercialization Focus

- We sell CytoSorb in more than 70 countries worldwide with more than 300,000 treatments to date
- Sell Direct in Germany and 9 other countries & through Distributors and partners in the remainder

Estimated Revenue By Market

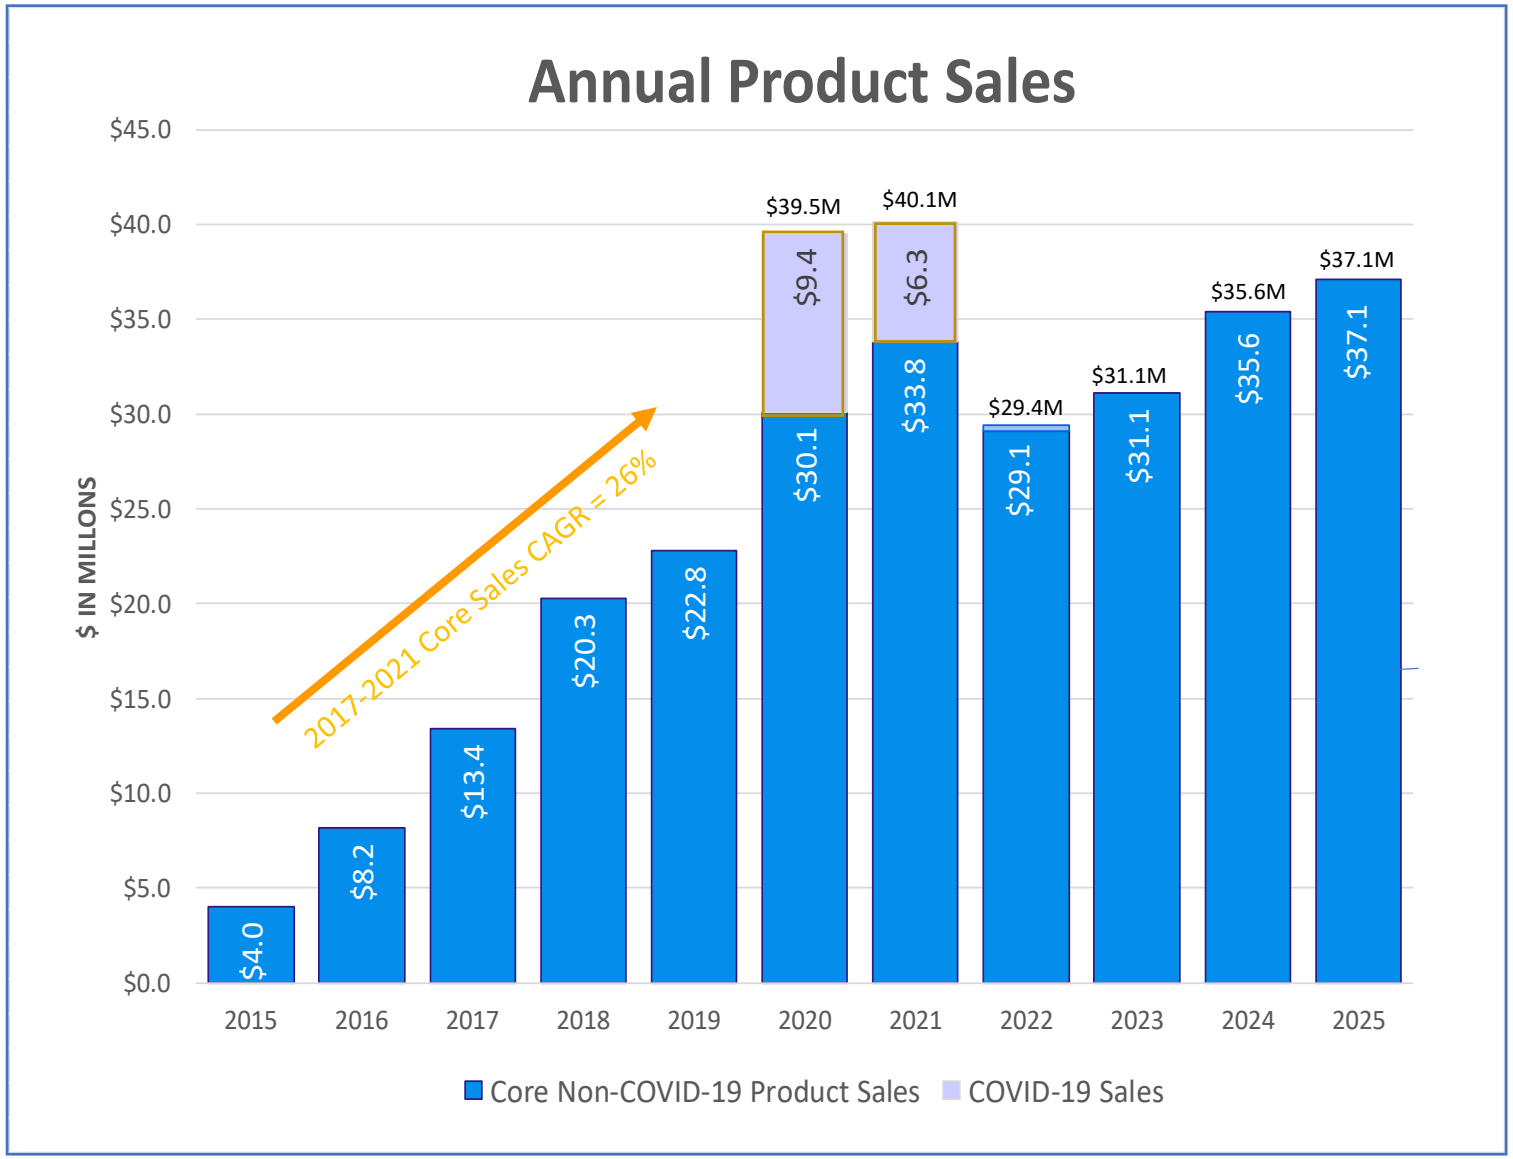

2025 Revenue

* Austria, Switzerland, Poland, Netherlands, England, Wales, North Ireland, Scotland, Ireland

CytoSorbents™

A History of Strong Annual Sales Growth

Following the resolution of the pandemic and the devaluation of the Euro to USD to parity in 2022, core sales have rebounded and continued to grow

Q2 2026: Solid Operating Progress

$9.6M

~$200K
Operating Cash Burn*

* Excluding restructuring costs of ~$200K

CytoSorbents™

Driving to Operating Cash Flow Breakeven in 2H 2026

* *Negative Free Cash Flow = Net cash used in operating activities plus net cash used in investing activities*

Driving improved cash burn through efficiencies and cost reductions

- $5.9 million in cash, cash equivalents and restricted cash at Q2 2026 end
- Net operating cash burn of $0.2 million in Q2 excluding $0.2 million of restructuring-related payments
- Improved gross margins, streamlined manufacturing, and cut costs including a 23% reduction in headcount since Sept 2025
- Continue to expect cash flow break even in the 2H 2026

The Opportunity of DrugSorb™ ATR

DrugSorb-ATR is an investigational device that is not yet cleared/approved by FDA, Health Canada, or by any other Global Regulatory Agency and is not commercially available for sale

CytoSorbents™

Blood Thinners and Cardiac Surgery

- Tens of millions of patients globally take Direct Oral Anticoagulants (e.g, DOACs like Eliquis® and Xarelto®) and antiplatelet agents (e.g, Brilinta®) either chronically or acutely to reduce risk of heart attack, stroke, and other serious thrombotic complications

- Each year, an estimated 10% will require emergent or urgent surgery, including cardiac surgery
  - ~5-10% of emergency cardiac surgeries involve patients on chronic DOAC therapy
  - ~5-10% of heart attack patients on antiplatelet agents are not eligible for a stent and require CABG surgery

- Blood thinners significantly increase the risk of perioperative bleeding in cardiac surgery. Delay of surgery for multiple days to "washout" the drug is typically recommended to reduce this risk

- However, waiting for drug washout may increase the risk of poor patient outcomes (e.g. thrombotic events, clinical instability, and sudden death) and wastes valuable hospital resources

- DrugSorb-ATR has received two FDA Breakthrough Designations, highlighting the lack of available effective therapies to address this pervasive and serious problem by removing the drug

- Seeking two parallel paths to De Novo marketing approval for DOACs and Brilinta®

Brilinta® , Eliquis®, and Xarelto® are trademarks of AstraZeneca, Bristol-Myers Squibb, and Bayer, respectively

CytoSorbents™

DrugSorb-ATR is an investigational device in the U.S. and Canada and not yet cleared/approved

The Pivotal STAR-T RCT Paper Is Now Published

Randomized, sham-controlled trial of intraoperative ticagrelor removal to reduce perioperative bleeding

Michael J. Mack, MD,[a] Richard Whitlock, MD,[b] Michael W. A. Chu, MD,[c] Bradley Taylor, MD,[d] Elias A. Zias, MD,[e] David Liu, MD,[f] Adam N. Protos, MD,[g] Chris Rokkas, MD,[h] Marc Pelletier, MD,[i] Chun W. Choi, MD,[j] Tarit Saha, MD,[k] Frank W. Sellke, MD,[l] David J. Schneider, MD,[m] Vinod H. Thourani, MD,[n] James Douketis, MD,[o] Cyril David Mazer, MD,[p] Weihong Fan, MS,[q] Efthymios N. Deliargyris, MD,[q] and Charles Michael Gibson, MD,[r,s] on behalf of the Safe and Timely Antithrombotic Removal-Ticagrelor (STAR-T) Investigators

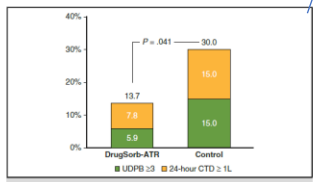

ABSTRACT

Objective: Patients on ticagrelor who are undergoing cardiac surgery before completing guideline-recommended washout are at high risk for severe bleeding. This study evaluated whether a novel drug removal device reduces bleeding in patients operated within 2 days from ticagrelor discontinuation.

Methods: Eligible patients were randomized 1:1 to intraoperative DrugSorb-ATR or sham control. Primary safety end point was adverse events at 30 days. Efficacy was assessed by composite end points comprising bleeding events using Universal Definition of Perioperative Bleeding (UDPB) and 24-hour chest tube drainage (CTD) in the overall and isolated coronary artery bypass grafting (CABG) populations with a hierarchical win ratio (WR) method.

Results: In total, 140 patients were randomized; 132 had surgery and received a study device; and 92% were isolated CABG. Mean age was 65 ± 5 years, and 15% were female. The primary safety end point was met, with similar adverse events reported between groups. The primary efficacy end point was not met in the overall or CABG populations (Win ratio [WR], 1.07; 95% CI, 0.72-1.58; $P = .748$ and WR, 1.33; 95% CI, 0.86-2.04; $P = .202$ respectively). The supplementary efficacy end point was met in the CABG population (WR, 1.59; 95% CI, 1.02-2.46, $P = .041$) with significant reductions also shown in large CTD bleeding events ($P = .016$) and major bleeding, a composite of severe bleeding events or 24-hour CTD ≥1 L ($P = .041$). The number needed to treat to prevent a major bleed was 6.

Conclusions: Intraoperative use of DrugSorb-ATR is safe in patients operated within 2 days of ticagrelor discontinuation. Although the primary end point was not met in the overall population, there were significant reductions in severe bleeding events in the prespecified CABG population. (J Thorac Cardiovasc Surg 2026;■:1-10)

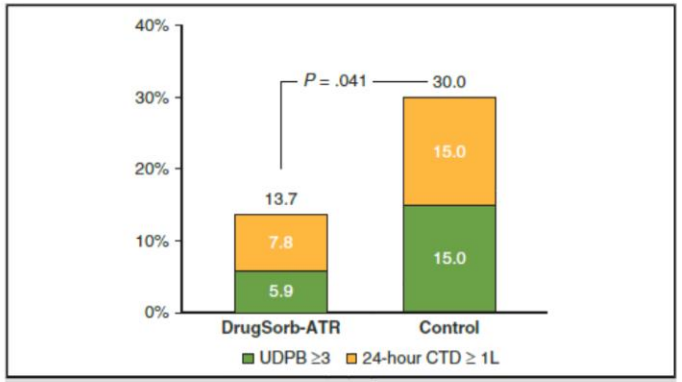

Major bleeding, a composite of severe bleeding events (UDPB ≥3) or 24-hour CTD ≥ 1 L.

CENTRAL MESSAGE

Intraoperative DrugSorb-ATR use for ticagrelor removal is safe and can reduce the severity of bleeding after isolated CABG in patients operated within 2 days of drug discontinuation.

PERSPECTIVE

Antithrombotic drug–related perioperative bleeding risk is a major clinical issue frequently resulting in surgical delays. The present study showed that the intraoperative use of a device that can remove ticagrelor from blood was safe and reduced severe bleeding events among patients undergoing CABG within 2 days of ticagrelor discontinuation.

Major bleeding, a composite of severe bleeding events (UDPB ≥3) or 24-hour CTD ≥ 1 L.

CENTRAL MESSAGE

Intraoperative DrugSorb-ATR use for ticagrelor removal is safe and can reduce the severity of bleeding after isolated CABG in patients operated within 2 days of drug discontinuation.

Although the primary endpoint including both CABG and high-risk cardiac surgeries was missed due to imbalances in the study, in the pre-specified CABG subgroup (main use population):

- Significant 16.3% absolute reduction in major bleeding (13.7% treatment vs 30.0% control, p= 0.041)
- 57.7% relative reduction in major bleeding
- NNT = 6: Six patients need to be treated to prevent 1 serious bleeding event

DrugSorb-ATR is an investigational device in the U.S. and Canada and not yet cleared/approved

Key Real-World Evidence Presented At ESC 2026

ESC CONGRESS 2026 MUNICH

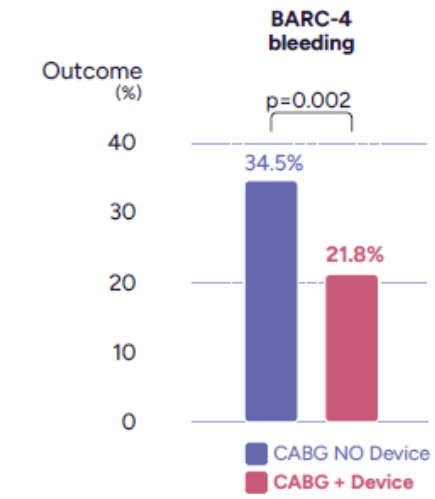

Intraoperative Ticagrelor Removal To Reduce Bleeding After Urgent CABG
Matched Comparison Of Patient-Level Observational Data

STAR Registry

U. Zeymer[1], M. Schoerghuber[2], T. Kuenzer[3], M. Thielmann[4], M. Dalen[5], G. Schlachtenberger[6], F. de Somer[7], C. Mayer[8], TJ. Donovan[9], M. Bernardi[10], N. Marczin[11], R. Tircoveanu[12], D. Wendt[13], M. Schmoeckel[14], A. Berghold[3]

- At ESC 2026, the largest patient-level matched analysis was presented comparing bleeding severity in 587 urgent CABG patients on ticagrelor with CytoSorb (n=198) from the STAR Registry or without (n=389) from a previously published individual patient data meta-analysis*
- The independent analysis showed:
  - A significant 37% relative reduction in BARC-4 severe bleeding with CytoSorb use (21.8% vs 34.5% in controls; p=0.002)
  - Number of patients needed to be treated (NNT) with CytoSorb to prevent one severe bleeding event after urgent CABG was eight (8) and consistent with the NNT of 6 seen in the STAR-T trial
  - Significant reductions in 24-hour chest tube drainage (p=0.039) and red blood cell transfusions (p=0.003) with CytoSorb use was also observed
  - No serious device-related adverse events were reported

Endpoint outcomes

Secondary outcome analyses showed that the device significantly reduced:

- 24-hour chest tube drainage (-125.4 mL; 95% CI: -244.2, -6.6, p=0.039)
- Red blood cell transfusions within 48 hours of CABG (-1.19 units; 95% CI: -1.97, -0.38, p=0.003)
- No serious adverse device-related events

Findings reinforce results from STAR-T trial and are expected to form a core component of additional real-world evidence proposed by FDA in last year's appeal to support probable benefit in new De Novo submission and quintuple (5x) the number of treated patients (n=249)

 | * Schoerghumber, M., et al., Eur J Cardiothorac Surg (2024); 66(1): ezae265

CytoSorbents™

DrugSorb-ATR is an investigational device in the U.S. and Canada and not yet cleared/approved

FDA Regulatory Path for DrugSorb-ATR and Brilinta®

Planning new De Novo Submission to FDA, where standard of approval is:

Probable Benefit Outweighs Probable Risk

Targeting New De Novo Submission in early-2027
Potential Marketing Approval in mid-2027

Aligning with FDA on type of data and experimental model → Additional Mechanistic Data

Data reinforces STAR-T results and increases treated patients in new De Novo by 5x (n=249) → New Real World Efficacy Analysis

Unlocking the Strategic Value of

HEMODEFEND-BGA

For Universal Blood Products

HemoDefend-BGA is a preclinical device that is not yet cleared/approved by FDA, Health Canada, or by any other Global Regulatory Agency and is not commercially available for sale

CytoSorbents™

Multiple Blood Products. Millions of Units. One Compatibility Platform

HemoDefend is a filter platform that removes anti-A and anti-B blood group antibodies that can be used for plasma and platelets to create “Universal” products that can be given to any patient regardless of blood type – the “Holy Grail” for plasma and platelets

PLATELETS

- **~2.2 million units transfused annually in the U.S.**
- Short shelf life and frequent ABO-mismatched use create a strong compatibility need

PLASMA

- **~1.9 million units transfused annually in the U.S.**
- ABO compatibility remains an important constraint on inventory and use

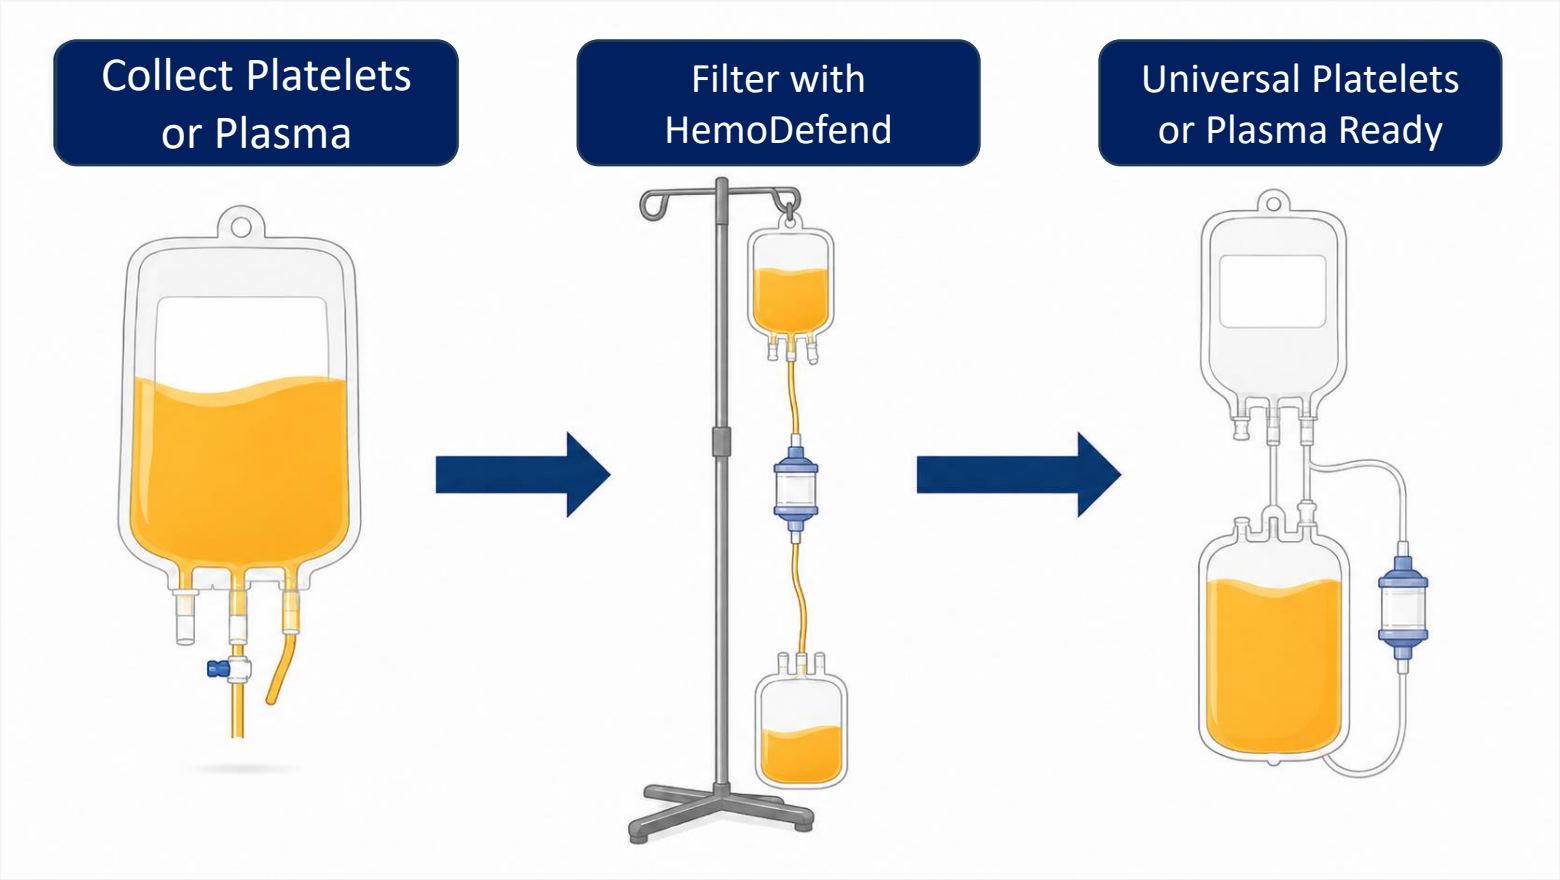

ADDITIONAL OPPORTUNITIES

- Whole blood
- Freeze-dried plasma
- Military & emergency medicine
- International markets
- Plasma processing applications

CytoSorbents™

HemoDefend-BGA is a development stage device in the U.S. and Canada and not yet cleared/approved

Simple By Design

GRAVITY DRIVEN
No capital equipment

~5–10 MINUTES
Simple processing step

SCALABLE
Designed to integrate into existing blood-center workflows

UNIVERSAL
Low-titer, broadly compatible blood

PLATFORM TECHNOLOGY
Same core technology can be applied across multiple blood products and compatible with freeze-dried formats

CytoSorbents™

HemoDefend-BGA is a development stage device in the U.S. and Canada and not yet cleared/approved

Designed for Broad Use Across the Blood Ecosystem

Blood Centers

Simplify the blood supply and create more broadly compatible products

Hospitals

Improve access to compatible blood products and reduce reliance on off-type transfusions

Emergency & Military

Simplified logistics and rapid administration of life-saving blood products when blood type is unknown or time is critical

Plasma Processing

Reduce ABO antibody constraints in plasma-derived products

CytoSorbents™

HemoDefend-BGA is a development stage device in the U.S. and Canada and not yet cleared/approved

HemoDefend Represents Significant Unrecognized Value

~$16 MILLION IN NON-DILUTIVE FUNDING TO DATE

- Major support from the U.S. government and the Department of Defense (War)
- Discussions ongoing for additional non-dilutive funding from the US Govt to fund clinical trials, manufacturing scale up, through approval.

POSITIVE FDA ENGAGEMENT

- Recent FDA feedback provided clarity on relatively straightforward clinical and regulatory path to potential FDA marketing approval

LEADING ORGANIZATIONS

Testing, Validation, or Engagement with:

- **Leading Blood Centers, like NHSBT**
- **Major Government Agencies**
- **Blood transfusion Industry Companies**

GROWING STRATEGIC INTEREST

Major blood-management companies have engaged around potential development support, strategic investment, commercialization capabilities, and other forms of collaboration.

First FDA BLA approved for Freeze Dried Plasma, paving way for “Universal Plasma” holy grail

HemoDefend-BGA is a Valuable Asset that Has Significant Strategic and Funding/Monetization Possibilities

CytoSorbents™

HemoDefend-BGA is a development stage device in the U.S. and Canada and not yet cleared/approved

Four Independent Value Drivers. One Uncommon Value

CytoSorbents™

CytoSorbents Investment Thesis: Risk-Reward Asymmetry

- CytoSorbents has four largely independent paths to value creation over the next 6–18 months, each of which could be significant catalysts for upside potential
  1) Achieving sustainable operating cash-flow breakeven
  2) Driving the high-margin CytoSorb franchise to stronger growth
  3) Opening the U.S. market through DrugSorb-ATR
  4) Unlocking the strategic value of HemoDefend-BGA

- Meanwhile, the company has been executing on its strategy to reduce its cost structure, preserve cash and create a pathway toward financial self-sustainability. Q2 2026 highlighted that progress, including achieving: 73% product gross margins, significantly improved operating performance, and near-breakeven operating cash burn

- We believe our current market valuation discounts our core business and the potential for significant near-term value creation with other major value drivers, while reflecting an asymmetric overemphasis on risks such as Nasdaq compliance, regulatory, and financial strength that we expect to resolve

At a market cap of ~$15M and <1X sales (EV~$26.5M) we believe the combination of our high margin single use disposables that addresses a global unmet need, with multiple independent near-term catalysts, and improving underlying fundamentals makes CTSO a compelling investment opportunity
